

(customised) SymPy Cheatsheet (<https://sympy.org>)

Basics

Sympy help:	<code>help(function)</code>
Declare symbols:	<code>var('x y z')</code>
Declare real symbol:	<code>x = Symbol('x', real=True)</code>
Substitution:	<code>expr.subs(old, new)</code>
Numerical evaluation:	<code>expr.n(); N(expr)</code>
Expanding:	<code>expand(expr)</code>
Simplify expression:	<code>simplify(expr)</code>
Previous answer(s):	<code>_ ; _3</code>

Constants

π :	<code>pi</code>
e :	<code>E</code>
∞ :	<code>oo</code>
i :	<code>I</code>

Number types

Integers (\mathbb{Z}):	<code>Integer(x)</code>
Rationals (\mathbb{Q}):	<code>Rational(p, q)</code>
Sympify $\frac{2}{3}$:	<code>S(2)/3</code>
Reals (\mathbb{R}):	<code>Float(x)</code>

Simplification and rewriting

Factoring:	<code>factor()</code> <code>factorint()</code>
Rational expr.:	<code>ratsimp()</code> <code>cancel()</code> <code>collect()</code>
Partial fractions:	<code>apart()</code>
Powers:	<code>powsimp()</code> <code>powdenest()</code>
Expand powers:	<code>expand_power_exp()</code>
Expand powers:	<code>expand_power_base()</code>
Square roots:	<code>radsimp()</code> <code>sqrtdenest()</code>
Trigonometric:	<code>trigsimp()</code> <code>expand_trig()</code>
Logarithm:	<code>expand_log()</code> <code>logcombine()</code>
Force application:	<code>...(..., force=True)</code>
Rewrite using 'func':	<code>expr.rewrite(func)</code>
Combinatorial:	<code>combsimp()</code>
Find exact repres.:	<code>nsimplify(0.333333)</code>

Basic functions

Trigonometric:	<code>sin</code> <code>cos</code> <code>tan</code> <code>cot</code>
Cyclometric:	<code>asin</code> <code>acos</code> <code>atan</code> <code>acot</code>
Hyperbolic:	<code>sinh</code> <code>cosh</code> <code>tanh</code> <code>coth</code>
Area hyperbolic:	<code>asinh</code> <code>acosh</code> <code>atanh</code> <code>acoth</code>
Exponential:	<code>exp(x)</code>
Square root:	<code>sqrt(x)</code>
Logarithm ($\log_b a$):	<code>log(a, b)</code>
Natural logarithm:	<code>log(a)</code>
Absolute value:	<code>abs(x)</code>

Equations

Equation $f(x) = 0$:	<code>solve(f, x)</code>
Newer alternative:	<code>solveset(f, x)</code>
Solve in \mathbb{R} :	<code>solveset_real(f, x)</code>
System of equations:	<code>solve([f, g], [x, y])</code>
Differential equation:	<code>dsolve(equation, f(x))</code>

Calculus

$\lim_{x \rightarrow a+} f(x)$:	<code>limit(f, x, a)</code>
$\lim_{x \rightarrow a} f(x)$:	<code>limit(f, x, a, dir='+')</code>
$\lim_{x \rightarrow a-} f(x)$:	<code>limit(f, x, a, dir='-')</code>
$\frac{d}{dx} f(x)$:	<code>diff(f, x)</code>
$\frac{\partial}{\partial x} f(x, y)$:	<code>diff(f, x)</code>
$\int f(x) dx$:	<code>integrate(f, x)</code>
$\int_a^b f(x) dx$:	<code>integrate(f, (x, a, b))</code>
Taylor series (at a , deg n):	<code>series(f, x, a, n)</code>
Formal power series	<code>fps(f, x, a)</code>
$\text{Res}(f, z_0)$	<code>residue(f, z, z0)</code>

Discrete math

Factorial ($n!$):	<code>factorial(n)</code>
Binomial coefficient $\binom{n}{k}$:	<code>binomial(n, k)</code>
Sum ($\sum_{n=a}^b expr$):	<code>summation(expr, (n, a, b))</code>
Product ($\prod_{n=a}^b expr$):	<code>product(expr, (n, a, b))</code>

Unevaluated "noun" forms

Sum, product:	<code>Sum(expr, (n,a,b)) ; Product()</code>
Limit:	<code>Limit(f, x, a)</code>
Derivative, integral:	<code>Derivative()</code> ; <code>Integral()</code>
Evaluate:	<code>Integral(f, x).doit()</code>

Complex numbers

$\text{Re}()$, $\text{Im}()$:	<code>re()</code> <code>im()</code>
Expand:	<code>expand_complex()</code>
Re, Im as tuple:	<code>expr.as_real_imag()</code>
$\text{Arg}(z)$, $ z $:	<code>arg(z)</code> <code>Abs(z)</code>
\bar{z} :	<code>conjugate(z)</code>

Linear algebra

Matrix definition:	<code>m = Matrix([[a, b], [c, d]])</code>
Column vector:	<code>c = Matrix([a, b])</code>
Row vector:	<code>r = Matrix([[a, b]])</code>
Transpose:	<code>r = c.T</code>
Determinant:	<code>m.det()</code>
Inverse:	<code>m.inv()</code>
Identity $n \times n$:	<code>eye(n)</code>
Zeros, Ones $n \times n$:	<code>zeros(n)</code> <code>ones(n)</code>

Plotting (Jupyter notebook)

Interactive plots:	<code>%matplotlib notebook</code>
Basic plot:	<code>plot(f)</code>
Custom limits:	<code>plot(f, (x,a,b), ylim=(ya,yb))</code>
Multiple functions:	<code>plot(f, g, h, (x,a,b))</code>
Combine plots:	<code>plot1.extend(plot2)</code>
Parametric plot:	<code>plot_parametric()</code>
Implicit plot:	<code>plot_implicit(expr)</code>
3D surface plot:	<code>plot3d(f(x,y))</code>
3D line plot:	<code>plot3d_parametric_line()</code>
3D param. surf.:	<code>plot3d_parametric_surface()</code>

Printing

mathjax:	<code>init_printing(use_latex='mathjax')</code>
L ^A T _E X print:	<code>print latex()</code>
Pretty print:	<code>display()</code>
